Docket No. CU-3674

### Amendments To The Claims

The listing of claims presented below will replace all prior versions, and listings, of claims in the application.

#### Listing of claims:

1. (cancelled)
2. (currently amended) A compact camera module comprising a lens unit including a lens and a lens holder holding the lens therein and an image pickup unit attached to the lens unit, wherein the image pickup unit comprises:
  - a circuit board;
  - an image pickup device on the circuit board;
  - a cover member arranged on the circuit board to cover the image pickup device;
  - and
  - an optical filter arranged with respect to the cover member to face the image pickup device,wherein the image pickup device is disposed in a substantially closed space formed by the circuit board, the cover member, and the optical filter,  
wherein the cover member includes an air hole to make the substantially closed space in communication with the outside to allow air to escape from the substantially closed space; the lens unit includes a ventilation channel; the air hole is in communication with the ventilation channel, and  
wherein the ventilation channel is formed between a wall of a ~~cutout of the lens~~

cutout in the lens and the lens holder, and the ventilation channel extends at least from a top of the lens to a bottom of the lens.

3-4. (cancelled)

5. (previously presented) The compact camera module as claimed in claim 2, wherein the ventilation channel has an air filter disposed therein.

6. (cancelled)

7. (original) The compact camera module as claimed in claim 2, wherein the image pickup unit is asymmetric with respect to a central line.

8. (original) The compact camera module as claimed in claim 2, wherein  
a grounding terminal is formed on a side surface of the circuit board, said  
grounding terminal including a portion extending to an upper surface of the circuit board;  
and

the cover member is arranged to be in contact with the portion of the grounding  
terminal extending to the upper surface of the circuit board.

9-11. (cancelled)

12. (currently amended) The image pickup unit as claimed in ~~claim 10~~ claim 2.

wherein the image pickup unit is asymmetric with respect to a central line.

13. (cancelled)

14. **(currently amended)** A lens unit for use in conjunction with an image pickup unit in a compact camera module, comprising:

a lens having a cutout formed in the lens; and

a lens holder that holds the lens therein,

wherein

a ventilation channel is formed between a wall of the cutout in the lens and the lens holder, and the ventilation channel extends at least from a top of the lens to a bottom of the lens.

15. (original) The lens unit as claimed in claim 14, wherein the ventilation channel has an air filter disposed therein.

16. **(currently amended)** A method of producing a compact camera module, comprising the steps of:

forming an image pickup unit wherein an image pickup device is disposed in a substantially closed space, wherein the step of forming the image pickup unit comprises the steps of:

installing an image pickup device on a circuit board;

covering the image pickup device with a cover member,

forming an air hole in the cover member to make the substantially closed space in communication with the outside to allow air to escape from the substantially closed space; [[and]]

arranging an optical filter with respect to the cover member to face the image pickup device;

wherein the cover member, optical filter, and circuit board form a substantially closed space, [[and]]

forming a cutout in the lens of a lens unit;

forming a ventilation channel between a wall of the cutout in the lens and a lens holder, wherein the ventilation channel extends at least from a top of the lens to a bottom of the lens; and

attaching the image pickup unit to [[a]] --the-- lens unit.

17-20. (cancelled).
